Torus is BPA free

How do I use Torus watering bowls?

It's so simple to use:

Remove the cap, turn the cap to the “tap” symbol and lift.
Fill with water from your water source.
Insert the carbon filter or supplement cartridge.

To release the water, turn the cap to “flow” symbol.

To transport, turn the cap to “padlock” symbol.
Remember the bowl will automatically fill up without batteries or power source.

How does the Torus watering system work?

1. Stored water is contained inside the TORUS™ walls.
2. Fresh water is drawn from the walls through the carbon filter.
3. The filtered water flows out into the drinking well where it is kept at an optimum level.

Why do I need Filters?

The Torus watering bowl uses activate carbon to remove impurities, to ensure your pet has access to clean, fresh, water every time. Each filter comprises a plastic molded cone with perforated walls which allow water to “flow through”.

Each Torus filter lasts for approximately a month, so each replacement pack of five filters gives your pet approximately five months of fresh, clean water. The Torus watering bowl comes with one filter to get you started.

Sometimes very small specks of carbon can be seen in the bowl when a new filter is installed

I noticed some carbon fragments in the replacement filter packaging.

What do I do?

Due to the fineness in the carbon, sometimes during transit/freight carbon fragments can spread through the packaging. The carbon is harmless and will wash off in water. Simply unpack and use the carbon filter as per the instructions on the reverse. Remember each bowl comes with one free filter already.

TORUS™ is a pet watering system and portable storage bowl

TORUS™ watering bowls store up to 2L of water inside their reservoir walls, filtering the water as it automatically dispenses. Its large capacity means less filling and its low profile means less spills or mess. TORUS™ has lock, fill and drink functions making it ideal for travel. TORUS™ does not require batteries or a power source and has a 12 month warranty. TORUS™ watering bowls come in two sizes, 2L which is ideal for multi-pet homes and larger pets and a 1L which is perfect for smaller pets. Each bowl comes with one carbon filter and the range includes replacement filters.

1 Liter water capacity
1 Quart / 0.25 Gallon

5 month filter supply

The benefits of TORUS™

1L & 2L stored water capacity
Auto refills without batteries
Filters water as it dispenses
Lock function for portability
Monthly replacement filters
Less refilling and less spills/mess

Ergonomic, robust & durable design
12 month warranty
Designed in New Zealand
BPA Free
Easy Cleaning

What does TORUS mean? TORUS is Latin for 'hollow circular ring'

How much water does an average pet drink?

There is no average. Water consumption is dependent on breed, age, amount of exercise, medications, wet or dry food etc.

Why use TORUS?

Pets need plenty of fresh, clean water every day.

TORUS (Latin for ‘hollow circular ring’) stores its water inside the reservoir walls ensuring an ample supply of water. Each time your pet takes a drink, replacement water automatically flows from the storage area into the drinking well. Active carbon in the replaceable filter reduces flavors and trace elements commonly presented in municipal water supplies.

TORUS™ is exceptionally stable. Low profile geometry and soft rubber feet help prevent accidental spills by boisterous pets or passers-by. The water level in the drinking well is always high enough to allow easy drinking but low enough to minimize water spills and splashes. The water can even dispense in moving vehicles.

TORUS™ watering bowls are a go-anywhere bowl that doesn't require batteries or power supply. The valve position, when locked, secures stored water inside the walls so you can take TORUS™ with you wherever you go.

Instructions <http://www.heyrex.com/en/torus/instructions/>

How To's <http://www.heyrex.com/index.php?CID=817>

What pets can use Torus?

We have been sent photos of cats, dogs, pigs, rabbits, hens & chickens all using Torus.

How do I know the bowl is empty of water?

1. The water will dispense slower or not at all
2. The bowl when lifted up is lighter

How do I clean my Heyrex Torus bowl?

Your Torus bowl is robust and should last you a long time. However, we do recommend that like any drinking utensil, it should be cleaned to maintain its presentation and hygiene.

Every Torus bowl should be cleaned with warm soapy water or vinegar and then thoroughly rinsed regularly. We also recommend that you use sterilizing tablets which are readily available from your supermarket, such as those used for baby bottles every few months. A global brand of sterilizer that is commonly used and readily available is Miltons. Information about Miltons sterilizing tablets is found at <http://www.milton-tm.com/en/consumer/products/sterilising-tablets>

What may cause white “tidal marks” in your Torus bowl?

Tap water can come from different sources in different countries and contain different chemicals and elements. For example, in many countries the water is from subterranean aquifers or even from desalination plants, whereas in other countries, drinking water is drawn directly from lakes and rivers. There may also add some added chemicals (NZ adds fluoride in some places).

Subterranean water can create stone around heating elements when boiled and tastes “stoney”. It often leaves some marks on tea cups. Water from such sources is commonly termed “hard water”.

We do recommend that if an owner feels that the bowl needs a clean that they use sterilizing tablets like those used for baby bottles or use soapy water, or vinegar and then rinse well.
