1. What are TriSpecs?

Every pair of TriSpecs has two retractable Earbuds for listening to Music and built-in Microphones for making Phone calls.

2. How do they work?

TriSpecs use Bluetooth to connect to your Mobile phone, MP3 player, Computer, or any other Bluetooth enabled device. Using Bluetooth, music and phone calls are all wirelessly streamed through the sunglasses.
3. What can TriSpecs do?

**Music** - At the end of each temple there is a retractable earbud. When you pull out the earbuds they act just like a pair of headphones. You can control the music right from the glasses.
There are three buttons on the right temple:

1) **<< BACK**  
2) **PLAY/PAUSE**  
3) **FWD >>**

**Phone** - There are TWO built-in microphones which allow you to make phone calls hands-free. Why two microphones? (See the Noise Cancelation section below)
There are three buttons on the left temple:

1) **VOL -**  
2) **OneTouch/Call**  
3) **VOL +**

4. What happens when I get a phone call?

TriSpecs announces the incoming call over the earbuds (a voice actually says “incoming call from” and then reads the number) simply press the OneTouch/Call button to answer the call.
If you were listening to music when you got the call, the music is automatically paused. When you hang up, by pressing the Call button, the music will resume from where you left off.

5. What do I need to know about Bluetooth?

In order to link your TriSpecs and your Bluetooth device you will need to “pair” them. This is a one time step which links TriSpecs with your device. The next time you turn on your TriSpecs and device they will automatically “remember” each other and begin working automatically.
6. How do I do to get started?

![Quick Start diagram]

7. Will TriSpecs work with my phone?

TriSpecs will work with any phone which has Stereo Bluetooth (also called A2DP). See a list here >> [http://www.a2dp.net](http://www.a2dp.net)

Note: iPhone (3.0 software) is Stereo Bluetooth compatible -- Most Blackberry devices are Stereo Bluetooth compatible.

8. Will it work with my MP3 Player?

Yes, if your MP3 player has Stereo Bluetooth (Ex. Ipod Touch 2nd Gen). Simply pair the device with your TriSpecs and start enjoying. You can have the glasses paired to both a Phone and an MP3 player at the same time (music will pause when a call is received).

9. How far will the glasses work from my phone?

Bluetooth can operate over a distance of 30ft depending on the surrounding conditions.
10. **What is the battery life?**

Eyewear provides over 70 hours of standby time, up to 7 hours of talk time or 5 hours of music playback time when fully charged.

11. **How do I charge it?**

   ![Charging Diagram]

   **Note:** If the battery is completely discharged, it may take a few minutes before the charging indicator becomes active.

12. **Where is the on/off button**

   There is no on/off button. When communication between TriSpecs and your phone/device is interrupted (ie. when TriSpecs is out of range); the glasses will try to re-establish the connection. After 10 minutes of no connection to your phone/device, TriSpecs will turn off automatically.

   With 70 hours of standby time you really never need to power off your TriSpecs. If you are not using them simply turn off Bluetooth on your phone and TriSpecs power off automatically.
13. **How do I power TriSpecs on and off**

Power on: Pull out the right earbud.

Power off: Press and hold the Track Back button, while holding it, press the Retract Button (Right).

Note: Make sure the earbud is extended when powering off.

(Before pressing the Track back and Retract buttons make sure the right earbud is pulled out).
