

## QUICK USE INSTRUCTIONS

### 1) INSERT INCLUDED MEMORY CARD

- Ensure the dashcam is powered off.
- Insert the included memory card into the memory card slot with the gold pins facing the display screen. Do not force the memory card into the slot as it can only be inserted in one direction. Once successfully inserted, it will click in.

### 2) ATTACH THE WINDSHIELD MOUNT

Simply screw in the mount's adaptor clockwise to fasten it to your dashcam. Apply the suction cup side to the top of your windshield.

### 3) PLUG INTO POWER

Insert the auxiliary power adaptor into the camcorder's USB port and the larger end into your car's power port.

The camcorder will automatically power on with your car's ignition and begin recording a video file. To stop or start a recording at any time, press the **OK** button. You may also remove the auxiliary DC power adaptor at any time to automatically save a recording and power the camcorder off. Just mount it to your windshield, plug in the power and drive!
