Your Solar Security Sign loves sunlight.

For reliable glow at night, make sure it can receive direct sun during the day.

For best results, use type LiFePO₄ batteries. Install only new batteries of the same type in your product. Failure to insert batteries in the correct polarity, as indicated in the battery compartment, may shorten the life of the batteries or cause batteries to leak. Do not dispose of batteries in fire. Batteries should be recycled or disposed of as per state and local guidelines.

Warning: Changes or modifications to this unit not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

How to replace the battery:

Rechargeable batteries lose capacity over time. If your sign stops glowing at night, it's time to replace the battery.

To do this, remove the battery cover and insert a fresh 14430 LiFePO₄ cell.
