

TotalBoost Mini™

Troubleshooting

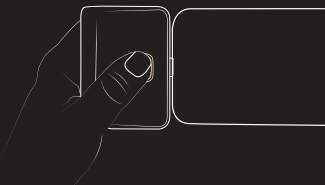

If the **Switch** is more difficult to push once an adapter is installed, try doing this to make it easier:

Hold the TotalBoost Mini as shown in the figure and use your thumb to push the **Switch** and dislodge the adapter.

Tip: Try using your nail for extra leverage.

If the adapter gets stuck in a device when unplugging, try doing this:

Re-insert the adapter into the TotalBoost Mini and apply pressure on the **Switch** while disconnecting from the device. This will hold the adapter in place.
