

How to Program Your Benjilock

It's easy. Just follow these steps.

1. Wake up the lock.

Touch the fingerprint sensor and blue will show around the sensor

2. Let it know you are programming.

a. Insert the key. Turn counter- clockwise until the blue LEDs around the fingerprint sensor are solid.

b. Touch the fingerprint sensor until the blue LEDs flash.

b. Press the silver button on the bottom one time. Wait two seconds until the blue light at top flashes blue. Note it will flash once for user #1, twice for user #2, up until 10 times for the 10th user.

3. Teach it your fingerprint.

a. Place your finger on the sensor until the blue LED at the top of the lock turns on. Let it turn off and take your finger off.

b. Do that 4 more times so it really learns you.

After your 5th time, the light will then blink multiple times and you've been successful!

4. You're all set!

Remove the key. You can now open the lock with just your finger. Try it!

If you have any issues along the way, just go back to step 1 and do it again.
