

CARBONKLEAN peeps™

Prescription Glasses • Sun Glasses • Reading Glasses

Q) How do I get the best result with my Peeps?

A) First, always use the brush (as pictured) to remove any debris on your glasses.

Q) Why do my glasses smudge or smear when cleaning sometimes?

A) When using any micro fiber product like peeps, they are designed to clean, dust, debris, fingerprints and smudges. If you have hair spray, make up, make up remover or oils, please wash your lenses first with water and a mild soapy liquid before using peeps.

Q) How do I apply the Peeps pads?

A) After brushing to remove debris, use the peeps pads like tweezers to get a good clean swipe of your lenses with the gentle microfiber pads.

* Separate your Peeps cleaning pinchers from the recharging station by placing your fingers on the grips, hold the case, and pull.

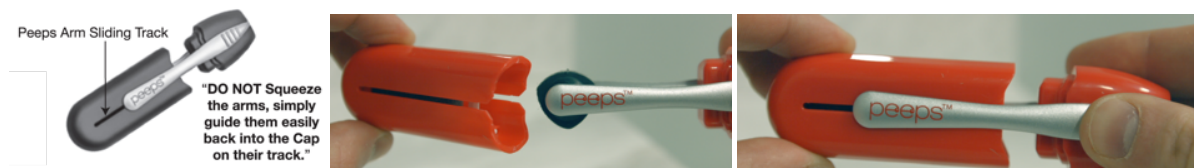

* Place your lens in between the two cleaning pads and gently squeeze the cleaning pads against the lenses, while rubbing in a back and forth or circular motion until the lenses are clean. Do not squeeze too hard.

Q) How do I put the peeps back into their holder?

A) Please release the tweezing pressure that you used to clean the lenses and align the arms to the slots so that they cradle around the self-cleaning pad on the inside.

Enjoy your Peeps!
