

## FREQUENTLY ASKED QUESTIONS

### **DO I NEED TO PULL WEEDS?**

Our seed pouches are embedded in a weed-blocking fabric which helps to keep out weeds. As we like to say, spend time with your kids, not your weeds ;)

### **DO I HAVE TO BURY THE SEEDSHEET?**

No, simply place the Seedsheet (seed-side-down) **on top of soil** and secure with the included stakes. Refer to our **INSTRUCTIONS** page for detailed instructions.

### **DO I HAVE TO PUNCTURE THE SEED POUCHES?**

No, as soon as you water your Seedsheet the pouches will begin to dissolve. Follow the watering directions on our **INSTRUCTIONS** page for more information.

### **CAN I GROW INDOORS?**

It will depend on how much light you have available. If you have a large south-facing window that gets 8+ hours of direct light then you can grow our Herbs, Salads, or Tacos Seedsheet. All of the other Seedsheets are also able to be grown indoors, however they will require a LED light for optimal growth and harvest sizes. We recommend a full-spectrum LED grow light for indoor growing.

### **DO I HAVE TO PLANT IN A CONTAINER, OR CAN I PLANT OUTSIDE IN THE GROUND?**

We recommend planting in a container, however you can plant Seedsheets directly onto the ground, providing that it is nicely tilled loose nutrient-rich soil. For a container we recommend potting soil mix to help with water drainage, since root drowning is one of the largest problems with container gardening.

### **HOW MUCH DO I WATER A SEEDSHEET?**

An instructional brochure is included in each package to guide you on your gardening journey. You can also follow our video **INSTRUCTIONS** for initial watering information. During the germination phase you should gently water every morning since seeds need constant moisture to sprout. Once your plants develop beyond seedling stage and grow their "true leaves" (roughly

when plants are >3" inches tall) they will need more water to support the larger plants. To determine if your developed garden needs to be watered, simply push a finger down 2" into the soil on the outside edge of the Seedsheet, if it is dry add water.

### **WHAT IS THE WEED-BLOCKING FABRIC MADE OUT OF?**

The Seedsheet is made from a flexible, breathable, and perforated fabric, NOT a plastic sheet! Water is able to drip through, and perforations help airflow to prevent soil mold and root rot.

### **HOW MUCH SOIL DO I NEED TO PLANT MY SEEDSHEET ON?**

We recommend using the fabric container that we offer for all container Seedsheets. However if you choose to grow in a container you already own, we strongly recommend at least 8" of soil for Herbs, Salads, and Tacos, and +12" inches for Caprese, Cocktails, and Hot Sauce. For large outdoor Seedsheets we recommend planting in a raised bed with 24" of good soil.
