

Van Zyverden's
GRAPE HYACINTH GRAPE ICE

Muscari, also commonly known as Grape Hyacinths, are spring flowering bulbs that should be planted in the fall. Each produces a cluster of narrow strap-shaped, basal leaves, usually appearing just before the flowers. Leafless flower stems bear dense spikes of small flowers. These dainty, grape-like clusters of color make a dramatic underplanting for taller bulbs of nearly any color. Planted en masse or in broad, informal sweeps, they create an unforgettable show! Muscari colonize and naturalize readily, are self-seeding under ideal conditions and thrive for many years to come with little care or maintenance. When in bloom, feel free to cut some flowers for tiny vase bouquets.

The only true purple variety

Return year after year

Botanically known as Muscari

About This Variety: Grape Ice is a newer variety in the famous Muscari family. What makes it so special is its very unique purple-green-white florets that are like no other Grape Hyacinth. Grow them in between other plants to give them a starring role or plant them in pots. They will get attention and even Master Gardeners will stop and stare at them.

Growing Instructions: To ensure optimal results, allow adequate space and sunlight, plant at the appropriate depth and feed with a well balanced fertilizer. Allow the leaves to yellow/brown before removing. For an informal look, plant in groups in natural swathes.

Care Tip: Plant in well draining soil. After planting, water well to settle the bulbs.

Exposure: Full Sun to Partial Shade

Height: Grows 8-12" tall

Spacing: Plant 3" apart, 3-4" deep

USDA Zones: hardy in USDA zones 4-8

Guaranteed to grow 1 year from purchase if directions are followed. Any concerns related to quality and/or counts feel free to contact us.
