

ENERGIZER 10 PC. SOLAR LIGHT SET FAQ'S

Q: My fixture is not lighting.

A: First, make sure you remove the protective cellophane from the solar panel.

A: Make sure you've removed the battery tab. Place in sunlight for 24 hours and you'll be good to go. Any further problems, please call our customer service department.

A: Important. The photo electric cell that tells the fixture to go on at night is *very sensitive* to ambient light. If one of your fixtures fails to light, please perform the following quick test; simply place your hand over the solar panel and see if it lights. If it does, it means the fixture is perfectly functional and should be relocated to a darker area.

Q. Can my battery be replaced?

A: Yes, with an Energizer Rechargeable Solar Battery.

Q: Can I place my fixture under a tree or bush?

A: For maximum performance, the fixtures should be positioned to receive direct sunlight for at least 5-6 hours per day.

Q: How do I clean my fixtures?

A: Simply hose off or clean with a damp cloth.

Q: Does the bulb ever need replacing?

A: The LED bulb is designed for a lifetime of use.
