Key Tips for a Successful Seed Pod Garden

1) Do not over water - The outer pod shell will absorb moisture upon first watering. If you touch the pod and it feels moist, do not add water.
2) Plant the pod, pointed tip down. Seeds will sprout through the top flat edge
3) Plant the pod so there is 1/4” of the Pod above the soil level
4) Treat seedlings with extra care as they are delicate in their early stages
5) Use a good quality potting soil
