ULTIMATE INNOVATIONS

By the DePalmas

WHEELBARROW

1. Parts: A - Bolts (6)
 B - Nut (1)
 C - Plastic Pins (2)
 D - Screw (1)
 E - Handles (2)
 F - Wheel Frame (1)
 G - Tubes (2)
 H - Wheel (1)
 I - Bed (1)
 J - Storage Strap (1)

2. Assembly:

- Place the wheel frame (F) downward through the narrow front of the bed (I)
- Insert a plastic pin (C) into each side of the wheel (H)
- Place wheel (H) from inside into the wheel frame (F) as per the direction shown in picture 1
- Place screw (D) through (H) and wheel frame (F) and firmly secure with nut (B)
- Connect each tube (G) and handle (E) and insert into each side opening of the bed (I) and attach each with a bolt (A)
- Attach tubes (G) to wheel frame (F) using bolts (A)
- Attach handles (E) to bed (I) using remaining bolts (A)

3. Use:

Ideal for yard work ranging from collecting weeds to spreading mulch. For ground ground-level loading, lower handles to ground to rake, shovel, slide, roll or drag into the fabric bed. The only lifting necessary is to raise the handles from the ground. Due to the low center of gravity design, the Wheel Barrow carries most of the load, making moving heavy objects much easier. To store, remove the two bolts (A) adjacent to the two sides of the wheel (H), and fold by squeezing handles together. Use storage strap (J) to wrap around handles and bed to secure. Maximum weight capacity 150 lbs.
