

FAQ - FrostGuard Windshield and Wiper Cover w/ Mirror Covers

Q: What size windshield does the FrostGuard® fit?

A: The Standard size product measures 61" W x 41" L and the X-Large measures 70" W x 41" L (at base, outside the dowels). It is designed to cover the essential viewing area of your windshield and protect it from the accumulation of frost, ice, or snow.

Q: What size FrostGuard® with mirror covers should I buy for my vehicle?

A: FrostGuard® comes in two sizes: Standard and X-Large. We recommend using our Sizing Charts found on qvc.com to determine the best size based on your vehicle type. Buying too large a size for your vehicle can result in a loose fit on your windshield—leading to less protection for your vehicle as it allows for elements such as moisture and wind to come in contact with your windshield.

Q: How does it fit vehicles of different sizes?

A: The FrostGuard's® FitFast™ strap system is a 3-loop elastic attachment that allows for an adjustable fit. The FitFast™ system secures the windshield cover to the side-view mirrors on either side of the vehicle. Our patent pending design will accommodate mirror sizes of both older and newer vehicles, big and small.

Q: Will the Mirror Covers accommodate oversized mirrors?

A: The mirror covers with the XL size are compatible with regular and oversized (or towing) mirrors found on most light trucks. However, the product is not recommended for heavy commercial vehicles, such as semi-trucks and school buses.

Q: How do I install my FrostGuard®?

A: Choose which size elastic loop is right for your vehicle's mirrors, then loop it over your driver's side-view mirror. Unroll the FrostGuard® as you walk around the front of your vehicle. It may be necessary to slightly stretch the elastic loop to attach it to the opposite side-view mirror. Extend the bottom flap over the wipers for added protection. You may notice a little bit of exposed windshield—that's normal. Open the driver's side door and insert the security panel for extra protection.

Q: How do I install the mirror covers?

A: Choose the mirror cover with the FrostGuard® logo facing you and with the opening on the right-hand side. Slide that opening over the driver's side-view mirror and adjust the drawstring to secure the unit in place. Select the second mirror cover and repeat on the passenger's side-view mirror. The FrostGuard® logo will face the rear of your vehicle when the mirror covers have been installed correctly.

Q: Do I have to use the mirror covers?

A: No, the mirror covers are completely optional. The mirror covers are included to give your side-view mirrors the same protection from frost, snow, and ice as your FrostGuard®, but the main unit of your FrostGuard® will be secure in place and will work without using the mirror covers.

Q: Can the FrostGuard® be used on the back windshield of my vehicle?

A: The product is designed for use on the front windshield only.

Q: How do I protect from wind getting underneath my FrostGuard®?

A: Always choose the loop pairings that provide the most secure fit against the front of your windshield; the fit should be taught and flat. This will prevent sudden gusts of wind from getting “underneath” your FrostGuard®.

Q: What is the best way to clean my FrostGuard®?

A: Spot-clean with soap and cold water.

Q: Can the FrostGuard® be used as a sunshield?

A: The FrostGuard® is designed to block frost, snow and ice in cold weather. It should not be used as a sunshade or in extremely hot weather.
