Know Your Air Purifier

Introduction:

Thank you for choosing the Capri HEPA Air Purifier from Airvana®! Airvana air purifiers are designed to improve your indoor breathing environment simply, efficiently, and in style. Quality is key for Airvana so we use:

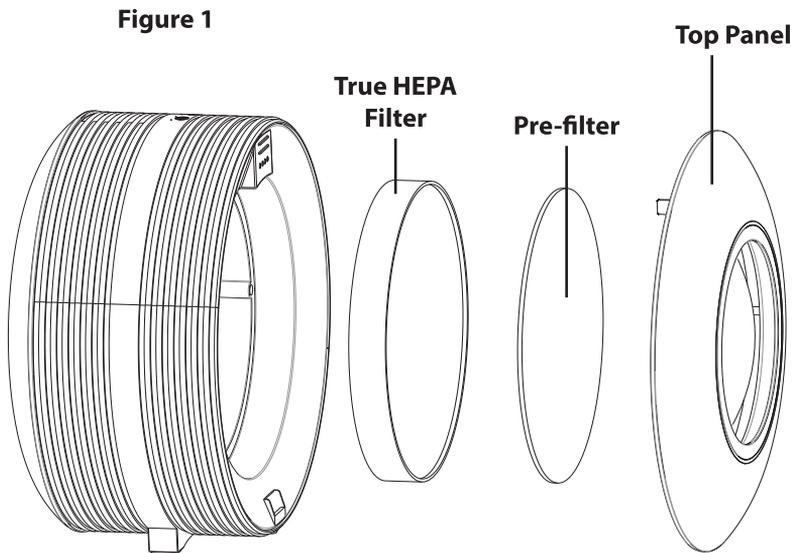

True HEPA Filter: Our HEPA filter is rigorously tested to ensure 99.97% efficiency in cleaning particles as small as 0.3 microns from the air, including smoke, dust, and pollen.

Natural Coconut Carbon Pre-Filter: The Pre-Filter uses carbon derived from coconuts. Carbon pre-filters reduce VOCs and household odors in the air as well as capture larger airborne particles including pet hair, dander, and fabric fibers, before they reach the HEPA filter.

Note: This guide covers several air purifier models. Your model may have some or all of the features listed. Please see care section relevant to your model.

How the System Works:

Air is pulled into the air purifier by the fan. The air passes first through the pre-filter, where larger airborne particles such as pet dander and hair are trapped. Smaller particles that pass through the pre-filter are then captured by the HEPA filter (up to 99.97% of particles as small as 0.3 microns).

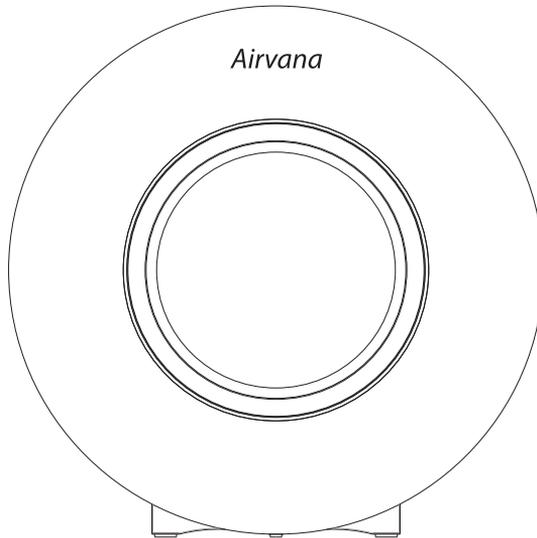

Initial Setup

Initial Setup:

1. Pull air purifier out of box and remove all packaging.
2. Unravel and straighten the cord before use.
3. Place air purifier on a flat and even surface. For proper air flow, place unit at least six (6) inches from any wall or furniture. DO NOT block air opening.
4. Plug power cord into wall outlet and start the unit.

Note: This air purifier should be operated indoors only.

Maintenance

Cleaning the Filters:

We recommend periodically checking and cleaning filters for optimal performance. Under normal conditions with an average of 12 hours daily use, the pre-filter must be cleaned every 3 months and the HEPA filter must be cleaned every 6 months. Please note that depending on air quality and environmental factors, filters may need to be cleaned more frequently or replaced if they are damaged.

IMPORTANT: DO NOT use water, any liquid, or detergents to clean the filters. Please note that the pre-filter and HEPA filter **MUST** be cleaned regularly or they risk becoming damaged and/or losing all efficiency. If replacing a filter, follow these same steps except where noted.

Cleaning the Pre-filter:

- Turn off and unplug air purifier from power source.
- Open and remove the front grille. Place a finger in slots on both sides of the air purifier and gently pull. **Figure 4**
- Remove the filter from the compartment of the air purifier.
- Remove the pre-filter from the HEPA filter by gently pulling away from Velcro.
- Vacuum pre-filter with utility nozzle attachment of vacuum cleaner. **DO NOT** use an attachment with brush bristles. (*Skip this step if replacing pre-filter*)
- Align the pre-filter with the HEPA filter and firmly press to reattach.
- Put the filter in the compartment of the air purifier.
- Place the front panel back on the air purifier. Align tabs at bottom of panel with slots on air purifier and push until panel latches in place.
