

Getting the Airbrushed Look – Tips & Tricks from the Makeup Experts at Luminess

1. Always start with a clean face! This will help your makeup stay and look fresher.
2. Begin application with a few short pulses of the Air Primer, this step helps prepare your skin, helping to create the appearance of a smooth flawless-looking finish.
3. When using foundations, start with the lighter shade first, concentrating on areas that you may want to illuminate – under eye circles or darker blemishes for example. Finish off with the darker of the two shades. Remember, unlike traditional makeup, when using AirSupremacy, you want to apply using short, light pulses, slowly building up coverage as you move continuously around your face. Staying in one area too long, or pressing continuously on the nozzle can result in unwanted blotchiness.
4. To add some natural-looking flush tones, using a few short pulses of the included AirSupremacy Blush. Simply spray on the apple of the cheeks – a little goes a long way and the color develops over-time so apply sparingly.
5. Finish off the look with a few sprays of AirSupremacy Makeup Sealant.
6. When someone pays you a compliment, just tell them “Beauty Must Just Be in the Air”....
