

SOFT CURLS

STEP ONE

Take a section no more than 2" wide by 2" thick and brush through section first.

STEP TWO

Hold the Perfecter vertically to the head. Place your Perfecter at the top of your section closest to your head. Place section in front of the brush top and wrap away from your face.

STEP THREE

Continue to wrap section around the brush top by rolling handle as you pull down. For more control, use opposite hand to hold hair at the top of the section (closest to the scalp) as you are creating the curl.

STEP FOUR

Repeat on each section of hair. Remember, do not start at the ends of your hair and curl up with your Perfecter.

TIP

Allow the curl to cool.

To keep your curls tight, hold each curl from the bottom and push up in a spiral shape after removing from the heat. For long lasting curls, spray after each curl and use a bobby pin or pin curl clip to clip the curl in round shape and let set for 10 to 20 minutes.
