

dyson supersonic

Whether you're drying or styling, we recommend using your Dyson-engineered attachments to get the look you want.

Smoothing nozzle
Dries and styles at the same time.

Styling concentrator
For precise styling.

Diffuser
Helps to define curls

Smoothing nozzle

To rough dry your hair, attach the nozzle vertically. This will move your hair gently from side to side, and can help lift it.

For styling, rotate the nozzle to horizontal. You might want to switch to a lower heat setting.

Point the airflow down your hair, using your fingers or brush to guide it.

Styling concentrator

Rotate your Styling concentrator to match the direction you're styling in. Use a round brush to guide your hair and create your style.

Diffuser

Cup your hair in the diffuser, starting at the tips. Very gently push upwards.

The trick is to move your natural curls as little as possible, so try not to touch or brush your hair, and stick to the lowest speed setting.
