

Tips for Success

We Help You Grow Simply search online "Sweet Potatoes with Devin Wallien" for a short informative video. Further information and growing tips can be found at RobertasUniqueGardens.com & QVC.com

Water Water your plants immediately after taking them out of the box. Give them enough water so that the soil appears damp and water trickles out the bottom of the pot. Ensure they remain evenly moist all growing season.

Plants look Dry or Foliage appears Lackluster Sometimes plants may appear dried out and wilted after the voyage. Do not despair. When this happens the foliage may look lackluster but the rootstock is still perfectly healthy and alive. To plump your plants back up, water them and wait 5 minutes and then water them again. This will generally rehydrate them. Keep these plants well-watered until you can re-plant them into larger containers or in the garden within the next week. If plants arrive dry, it is often because the roots have outgrown the small shipping pots and need more room to grow; roots tend to dry out quickly in small containers. Your plants are very much alive and when you transplant them into larger pots or the earth, they will start growing quickly! So, re-plant them as soon as possible. Remove any yellow or brown foliage.

Position Guide: Manihi A, B Makatea C, D

Form, function, beauty and edibility all rolled into one! When gardeners grow sweet potato vines they often do so year after year because they're such strong performers filling out beds and mixed containers quickly and beautifully. But this collection brings 2 brand new sweet potato vines that don't just produce awesome heart shaped foliage, at the end of the growing season there will be tasty, Edible sweet potatoes hidden like treasure for you to find! Include Manihi with deep purple maple shaped leaves and Makatea with chartreuse foliage.

Roberta's Gardens PLANTING AND GROWING GUIDE

Treasure Island™ Edible Potato Vines *Ipomoea hybrids*

We aren't happy if you aren't happy. If you have any questions regarding your order please call us at **1-765-525-4065** during the hours of 8:30 am and 4:30 pm EST.

You can email questions to us at: customerservice@robertasinc.com.

If your bulbs, cuttings, etc. do not sprout, or your plant dies within 90 days from the date of shipment, we will send you a replacement free of charge. We cannot accept responsibility for losses due to extreme weather or neglect. Simply call us at the above toll free number or fill out the plant replacement form on our website at RobertasUniqueGardens.com.

Roberta's will replace it with a similar or comparable plant at no charge. If your replacement is not available or it is too late in the season to ship, it will ship the following year.

-  **Light/Sun** Full Sun to Partial Shade
-  **Mature Height** 6-12"
-  **Mature Spread** 12-24"
-  **Bloom Time** n/a
-  **USDA Hardiness Zones** N/A

Plant Caretaking

Upon Arrival Please take plants out of the box immediately and remove any shipping materials from around the plants. Give them some water and place them in a warm shaded area for 1-2 days before replanting.

Planting Depth & Spacing Dig a deep enough hole so that the entire plant easily fits into the hole and the top of the soil line of your plant is flush with the top of the soil in the hole you have dug. It is important that the soil line of your plant does not protrude above the soil line in the ground or container. Space plants about 18" apart.

Potted Plants Make sure your container has holes to allow excess water to drain. They're wonderful additions to mixed containers providing a filler and spiller quality.

Soil Preparation If your soil is clayish, amend it with standard potting mix to improve drainage.

Watering To determine if your plant needs water, put your finger in the top of the soil and if the top inch is dry, it is time to water. It is important to make sure young plants do not experience long periods of dryness. However, they also do not like soggy conditions. They like to remain evenly moist throughout the growing season.

Fertilizer Use Roberta's Bounty a couple weeks after planting and then once or twice a month all summer long.

Pet Considerations Ensure your pets do not consume plants. Some plants are toxic to pets. Do your diligence to protect your pet.

Harvesting These plants are beautiful and edible! Planted in late spring, you can harvest the tubers about 120 days after planting. To harvest you will simply cut all the foliage off the plant, dig up the tubers, wash away all the excess dirt and voila! These varieties produce deliciously sweet and flavorful Sweet Potatoes.

Planting Steps

Step 1 Remove plants from their box and take off other packing materials. Open your box outside or somewhere you don't mind getting messy, as some of the soil may have been shaken loose in transit.

Step 2 Check if your plant is thirsty. They probably need a nice drink of water after their voyage. If the plant feels light or the soil is dry to the touch, give your plants a watering.

Step 3 Allow your plants time to adjust to their new home before re-planting by placing them in a warm shaded spot for 1-2 days. Then they will be ready for re-planting with renewed vigor.

Step 4 Pull away or cut off any yellow or brown leaves, or any old flowers – this is normal.

Step 5 Transplant into the garden or containers as soon as evening temperatures stay above 40F. Dig holes the width of the root ball and deep enough so that the original top of the soil is flush with the new soil line. Water the new location before and after planting your plant. This will help the young roots stay hydrated. Once you've placed your plant in the hole, fill in the rest of the hole with extra soil or potting mix, ensuring the entire root system is covered with soil.
