

## OUT OF BOX

Fragrant Mexican Tuberoses

Your bareroots are shipped to you with the utmost care. Once planted they may take 4-6 weeks, depending upon the weather conditions, to wake up and start growing. You can be assured they will begin setting roots once planted. They will grow very quickly and amaze you with their performance. We urge you to plant your new arrivals as soon as possible. In the event that planting must be delayed please keep these bulbs in a cool, dark dry place for a short period of time.

## CAUTION

Not all plant material is edible. Though most plants are harmless, some contain toxic substances which can cause headaches, nausea, dizziness or other discomforts. As a general rule, only known food products should be eaten. In case of ingestion, please contact your local poison control center at once and advise them of the plant ingested.

## PLANTING AND GROWING GUIDE

M48896 Fragrant Mexican Tuberoses

Collection: 5 Bulbs size Jumbo Size Clumps

## Fragrant Mexican Tuberoses

Tubular, singular, pristine white flowers. Each stem produces several flowers. Fragrant. Green strap-like foliage. Excellent cut flowers. An heirloom variety that has been grown in gardens since 1530.

### QUICK REFERENCE PLANTING GUIDE

LIGHT/SUN EXPOSURE	Full Sun - Partial Shade
USDA HARDINESS ZONE	Zones 7 to 10
PLANTING DISTANCE IN-GROUND	8"
MATURE HEIGHT/SPREAD	36" / 8"
BLOOM TIME	Mid - Late Summer

### SOIL PREPARATION

Although all of these items do well in average well-drained soil of all types, for optimum results you can improve your planting success as follows:

- 1 Spade or Rototill the soil to a depth of 12"
- 2 It's always good to add organic matter to your soil. You can mix in a 2-4" layer of dehydrated manure, garden compost, shredded leaves and/or peat moss.

### PLANTING INSTRUCTIONS

Dig a hole about 2-3" deep and twice the width of the dormant corm. Carefully place corm in the hole with its tip 1" below the soil surface. Work soil in and around corm, firming it with fingers.

### CONTINUING CARE

WATERING	Keep area where bulbs are planted lightly moist through the growing season.
MULCHING	Apply a 2-4" layer of mulch to promote moisture retention, maintain even garden soil temperatures.
WEEDING	Keep your area around your plants free of weeds. Weeds compete with all plants for food water and light. Walk around the garden periodically and pull weeds.
GROOMING	Deadhead spent flowers.
FEEDING	Discontinue any foliar or liquid feed by early September. Your plants want to harden off for winter dormancy.
WINTERIZING	In Zones 3-6, dig the bulbs in the fall before the first frost. Store them indoors in a cool dry place for the winter. Let the bulbs dry and cure for a few weeks prior to storing. In zones 7-10 apply a small layer of winter mulch.
